EXCEED! basic

What's New in Exceed! *Basic* 4.5

Telosa Software is pleased to announce the release of Exceed! *Basic* 4.5. This version contains several enhancements and fixes, including:

Enhancements

Smart Search
A new search method has been added to Exceed! *Basic* that allows you to search multiple fields at the same time when looking for a name. For example, you can type in a name and it will find it if it has been entered as a first name, last name, second first or last name, street address, or email address.

Reports
The phone type "website" was added as an option for some reports with phone type options.

Backup
Backing up your data to a directory which uses a Universal Naming Convention (UNC) path rather than a drive letter is now possible. We have also added an option in the Backup File Name to include the year in addition to month and day.

Zip Code Lookup
When entering a zip code, Exceed! *Basic* automatically fills in the city and state for you. Version 4.5 contains the most up-to-date list of zip codes in the United States and Canada.

Corrections

Custom Export
Our Custom Export feature would occasionally give you an error code depending on the boxes you checked for export.

Canadian Receipts
Changing the Receipt Preference on one record affected other records.

Quick Reports Navigator
When running certain quick reports it would only pull the current day's gifts.
